Theo Bernardin

Lead Data Engineer | GCP | DBT | SQL | Python | Scalable Data Pipelines | ETL & Cloud Solutions
France

Résumé

Senior Data Engineer with over 4 years of experience designing, developing, and deploying scalable data pipelines in large-scale cloud environments (GCP).

Expert in SQL, Python, GCP, DBT, CI/CD deployment, data pipeline monitoring, and production support. I've worked on complex data flows related to supply chain and retail, ensuring data quality, reliability, and resilience.

I'm passionate about learning and working in collaborative, agile teams to build innovative solutions that drive business value.

My key strengths:

- Strong background in data architecture for cloud-native systems
- Proven ability to mentor and onboard new developers
- Agile mindset and experience as a Scrum Master in a 10-person squad

Curious, reliable, and solution-oriented, I'm always open to discussing new data challenges or exploring career opportunities.

Expérience

Carrefour

Lead Data engineer
avril 2023 - Present (3 ans 3 mois)

Within the Phenix team, a central hub providing data across Carrefour France and various group entities, I'm responsible for the design, optimization, and management of data architectures to meet the strategic and operational

challenges of the retail sector. Focusing on supply chain and offer data, I hold a high-responsibility hybrid role built around three core pillars:

1. Tech Lead

- Target Architecture: Defining the technical vision and development standards for the team.
- Quality Assurance: Implementing engineering best practices, conducting code reviews, and maintaining technical excellence.
- Business Interface: Translating complex requirements from stakeholders and Product Owners into viable, robust, and scalable technical solutions.
- Mentoring: Providing technical guidance to developers, fostering their skill growth, and driving their onboarding onto the platform.

2. Lead Data Engineer

- GCP Ecosystem: Designing, deploying, and maintaining complex data pipelines leveraging Google Cloud Platform services.
- Analytics Engineering & Transformation: Performing advanced data modeling and transformation using dbt Core alongside a custom Carrefour framework.
- Governance & Optimization: Structuring the analytics architecture, managing data quality through rigorous testing and monitoring within BigQuery, and optimizing SQL queries to reduce costs.

3. Scrum Master

- Ritual Management: Leading Agile ceremonies (Daily, Sprint Planning, Retrospectives, Sprint Reviews, Backlog Refinement).
- Facilitation: Identifying, communicating, and resolving blockers (impediments) to streamline the team's workflow.
- Continuous Improvement: Tracking velocity, optimizing delivery processes, and maximizing value creation at every iteration.

Stack: SQL, dbt (Core), Python, GCP, Airflow, Gitlab, Jira, Confluence

Indépendant

Independent Data Instructor

avril 2024 - Present (2 ans 3 mois)

Delivering continuing professional education programs for adults transitioning into or upskilling within the data field. Core teaching modules included:

- Algorithms: Teaching foundational programming logic and problem-solving.

- Scientific Computing: Instruction on data manipulation, numerical analysis, and applied mathematics.
- Data Visualization: Guiding students in creating impactful visual representations of complex data.
- Data Engineering: Training on data pipelines, architecture, and modern engineering practices.

OPCODES

Data engineer

mars 2022 - avril 2023 (1 an 2 mois)

Contributed to the development of an exploratory dashboard focused on blockchain transaction analysis. This involved reverse-engineering existing code to understand and adapt legacy processes, extracting transaction data, and storing it efficiently in a cloud-based database.

Key responsibilities:

Reversed-engineered existing data pipelines and ingestion scripts to extract relevant blockchain data

Structured and stored large volumes of transaction data into a scalable cloud database (BigQuery)

Performed data cleaning, transformation, and aggregation to prepare insights for visualization

Built and refined dynamic dashboard components to explore transaction patterns and user behaviors

Technologies used: Python, SQL, Bigquery, Docker, JS, TS

Universidade de Trás-os-Montes e Alto Douro

Research data scientist

mai 2021 - juillet 2021 (3 mois)

Vila Real, Portugal

Machine Learning Research Intern – Precision Agriculture

Conducted research on early detection of plant diseases (grapevine leaves) using hyperspectral imaging data.

Leveraged machine learning techniques to identify early-stage symptoms and reduce data dimensionality, enabling more efficient storage and processing.

Focused on feature extraction and dimensionality reduction to optimize performance on large-scale hyperspectral datasets collected from custom sensors.

Key tools/technologies: Python, Scikit-learn, PCA, hyperspectral data processing

Office d'hygiène sociale de Lorraine (OHS)

Développeur web

avril 2019 - juin 2019 (3 mois)

Région de Nancy, France

Development of an intranet web interface for the company bringing together several tools:

A Windows Active Directory directory management system, to simplify actions on user accounts and delegate certain basic tasks.

A Citrix session logoff system.

The web interface was built using VB, HTML, JavaScript, ASP.NET, and ran on a Windows Server 2012 environment using IIS.

Formation

Polytech Annecy-Chambéry

Diplôme d'ingénieur, Informatique Données Usages · (2019 - 2022)

Universitatea „Babeş-Bolyai” din Cluj-Napoca

Erasmus, Informatique · (septembre 2021 - février 2022)

Université de Lorraine

DUT, Informatique · (2017 - 2019)

Lycée Frédéric Chopin

Baccalauréat, Scientifique · (2014 - 2017)
